

## SOLUTION HIGHLIGHTS

- Vendor agnostic observability platform
- Simplified configuration and workflows
- Analytics with real-time insights and AI-ready data
- Dashboard driven key performances indicators (KPIs)

## SOLUTION BENEFITS

- Innovate with Enterprise and Technology Partners across industry verticals
- Assure slice service and optimum performance
- Gain end-through-end insights per slice with smart visibility

## TYPICAL USE CASES

- Mass Events
- 5G Uptake
- Device Migration
- Service Assurance
- Video Encryption
- User Plane

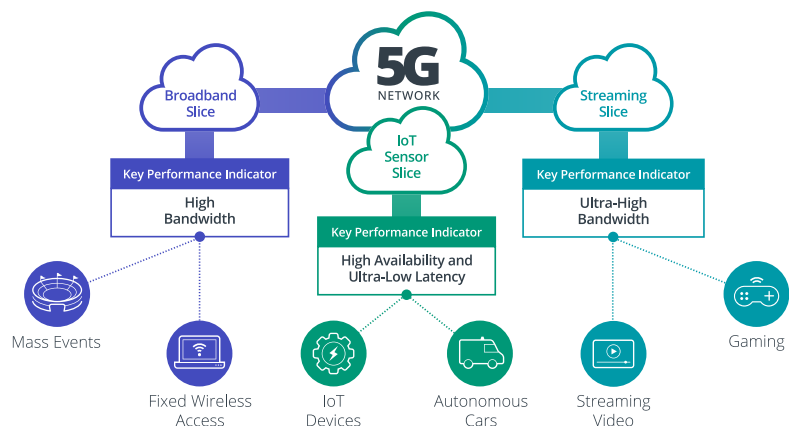

# 5G Slicing: No More Blind Spots

## Optimize Quality on Demand with Smart Slicing, from Edge to Core

With critical enterprise applications residing on 5G network slices, Carriers need relentless observability into slice performance to ensure latency and throughput requirements for, business continuity, quality of service, and service level agreements (SLAs) for critical 5G use cases:

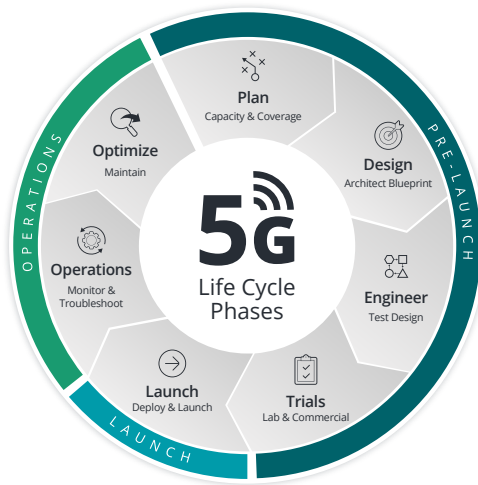

- Enhanced Mobile Broadband (eMBB) for high speed data
- Ultra Reliable Low Latency Communication (URLCC) for critical and instantaneous response
- Massive Machine Type Communication (mMTC) for connecting millions of low power devices

Differentiated services requires distinct performance profiles for speed, latency, reliability, and capacity as well as unique service level agreements (SLAs) per slice. A single blind spot can trigger service degradation, SLA penalties and loss of business confidence.

## 5G Lifecycle Powers Performance from Slice to Slice

From Slice planning to operations CSPs can rely on NETSCOUT® 5G Life Cycle end-through-end Observability framework, that is 3GPP compliant, scalable, integrated with network data analytics function (NWDAF) and provides a Life Cycle strategy with automation for the collection of high-fidelity curated datasets from packet level sources, enabling real-time insights, and automating root cause analysis across the RAN, transport, and core networks. This framework ensures quality of performance and comprehensive insights into SLAs for any slice, and any 5G use case (eMBB, uRLLC, mMTC).

## Effortlessly Manage SLA's with End-to-End Observability

CSPs leveraging NETSCOUT's packet intelligence can integrate NETSCOUT's data technology with their business systems to provide key metrics for a unified view into performance of complex 5G slices in real-time to ensure reliable delivery of services 24x7.

Configuring slices for 5G service types (eMBB, uRLLC, and mMTC) is easy using NETSCOUT nGeniusOne intuitive dashboard and workflows to enable Network Slice Selection Assistance Information (NSSAI) for observability and insights from RAN to core, and to the network edge.

As 5G networks transition to dynamic slicing, NETSCOUT is successfully assisting CSPs globally to observe 5G slices for critical events such as sports and gaming to ensure high availability and quality subscribers experience.

CSPs can rely on NETSCOUT solutions and Life Cycle strategy to ensure unified data correlation, scalable metadata management with our Smart Data offerings, and context aware problem resolution for visibility into mission critical SLAs..

## INTEGRATION SUPPORT

- **NWDAF:** Centralized analytics for slice load level scaling and mobility prediction.
- **Control Plane:** Real-time monitoring of PDU session establishment and control plane congestion.
- **User Plane:** Deep packet inspection (DPI) and throughput monitoring at the edge.

## PERFORMANCE METRICS

- The solution enables the isolation of primary KPIs per slice for successful SLA management and superior user experience from the RAN, core, and to the network edge for:
  - Latency
  - Throughput
  - Reliability
  - Availability

## Why NETSCOUT?

As a trusted partner to over 90% of the World's Tier 1 service providers, CSPs can rely on NETSCOUT's modern Observability architecture to design an end-to-end visibility strategy for network slices.
